VOLUMES 26–30

Reports on Progress in Physics

	VOL.	PAGE
BEARD, D. B.: Solar wind	30,	409
BIRSS, R. R.: Macroscopic symmetry in space–time	26,	307
BRAGG, SIR LAWRENCE: First stages in X-ray analysis of proteins	28,	1
BUTCHER, P. N.: Gunn effect	30,	97
CHARAP, J. M., JONES, R. B., and WILLIAMS, P. G.: Unitary symmetry	30,	227
CHARLESBY, A.: Solid-state polymerization induced by radiation	28,	463
CHESTER, G. V.: Theory of irreversible processes	26,	411
CHESTER, P. F.: Superconducting magnets	30,	561
COCHRAN, W.: Lattice vibrations	26,	1
COLEMAN, K. R.: Ultra-high-speed photography	26,	269
COOPER, J.: Plasma spectroscopy	29,	35
COSSLETT, V. E.: X-ray microscopy	28,	381
CUSACK, N. E.: Electronic properties of liquid metals	26,	361
DAVIDSON, W., and NARLIKAR, J. V.: Cosmological models and their observational validation	29,	539
DELVES, R. T.: Thermomagnetic effects in semiconductors and semimetals	28,	249
DEVONSHIRE, A. F.: Some recent work on ferroelectrics	27,	1
EDLÉN, B.: Wavelength measurements in vacuum ultra-violet	26,	181
EGELSTAFF, P. A.: Microscopic transport phenomena in liquids	29,	333
ELLIOT, H.: Van Allen particles	26,	145
FISHER, M. E.: Theory of equilibrium critical phenomena	30,	615
FOSTER, E. W.: Measurement of oscillator strengths in atomic spectra	27,	469
FULLER, W.: Physical contributions to determination of biological structure and function	30,	445
GARLICK, G. F. J.: Recombination emission in inorganic solids	30,	491
GEBBIE, H. A., and TWISS, R. Q.: Two-beam interferometric spectroscopy	29,	729
GEUSIC, J. E., and SCOVIL, H. E. D.: Microwave and optical masers	27,	241
GOODMAN, B. B.: Type II superconductors	29,	445
GREEN, A. M.: Collective vibrations in nuclei	28,	113
GUNNERSEN, E. M.: Recent applications of semiconductor techniques in study of nuclear radiations	30,	27
HELLER, P.: Experimental investigations of critical phenomena	30,	731
HENISCH, H. K.: Electroluminescence	27,	369
HOWARD, R. E., and LIDIARD, A. B.: Matter transport in solids	27,	161
HUGENHOLTZ, N. M.: Quantum theory of many-body systems	28,	201
HURLE, I. R.: Chemico-physical processes in shock waves	30,	149
JONES, R. B., with CHARAP, J. M., and WILLIAMS, P. G.: Unitary symmetry	30,	227
JUKES, J. D.: Plasma stability in magnetic traps: I—Magnetohydrodynamic stability theory	30,	333
KLEMPERER, O.: Electron beam spectroscopy	28,	77
KOSEVICH, A. M., with LIFSHITZ, I. M.: Dynamics of crystal lattice with defects	29,	217
KUBO, R.: Fluctuation–dissipation theorem	29,	255
LAMPERT, M. A.: Volume-controlled current injection in insulators	27,	329
LEMMER, R. H.: Nuclear reactions	29,	131
LIDIARD, A. B., with HOWARD, R. E.: Matter transport in solids	27,	161
LIFSHITZ, I. M., and KOSEVICH, A. M.: Dynamics of crystal lattice with defects	29,	217
MCLEAN, D.: Physics of high-temperature creep in metals	29,	1
MARADUDIN, A. A.: Some effects of point defects on vibrations of crystal lattices	28,	331

	VOL.	PAGE
MENZEL, E.: Studies in preparation and behaviour of nearly perfect metal surfaces	26,	47
MONTGOMERY, D. B.: Generation of high magnetic fields	26,	69
MOSS, T. S.: Photoconductivity	28,	15
MOTZ, H.: Plasma oscillations	29,	623
NARLIKAR, J. V., with DAVIDSON, W.: Cosmological models and their observational validation	29,	539
NEWTH, J. A.: Devices for detection of energetic particles	27,	93
NORTH, A. C. T.: X-ray crystallography of large molecules of biological importance	26,	105
OWEN, J., and THORNLEY, J. H. M.: Covalent bonding and magnetic properties of transition metal ions	29,	675
PARRY, W. E., and TURNER, R. E.: Green functions in statistical mechanics	27,	23
PASHLEY, D. W.: Direct observation of imperfections in crystals	28,	291
PHILLIPS, T. G., and ROSENBERG, H. M.: Spin waves in ferromagnets	29,	285
RASHBASS, C.: Sense organs—transducers of the environment	30,	375
ROSENBERG, H. M., with PHILLIPS, T. G.: Spin waves in ferromagnets	29,	285
ROSENBRUCH, K.-J., with ROSENHAUER, K.: Measurement of optical transfer functions in lenses	30,	1
ROSENHAUER, K., and ROSENBRUCH, K.-J.: Measurement of optical transfer functions in lenses	30,	1
ROWLINSON, J. S.: Equation of state of dense systems	28,	169
RUDERMAN, M. A.: Astrophysical neutrinos	28,	411
SCHWARTZ, M.: Neutrino physics	28,	61
SCOVIL, H. E. D., with GEUSIC, J. E.: Microwave and optical masers	27,	241
SHEPPARD, P. A.: Atmospheric tracers and study of general circulation of atmosphere	26,	213
SMITH, KENNETH: Resonant scattering of electrons by atomic systems	29,	373
STACEY, D. N.: Isotope shifts and nuclear charge distributions	29,	171
STEVENS, K. W. H.: Theory of paramagnetic relaxation	30,	189
TAYLER, R. J.: Origin of elements	29,	489

THOULESS, D. J.: Green functions in low-energy nuclear physics	27,	53
TURNER, R. E., with PARRY, W. E.: Green functions in statistical mechanics	27,	23
TWISS, R. Q., with GEBBIE, H. A.: Two-beam interferometric spectroscopy	29,	729
WALKER, J.: Nuclear reactors as research instruments	30,	285
WILLIAMS, P. G., with CHARAP, J. M., and JONES, R. B.: Unitary symmetry	30,	227

Cumulative Subject Index

VOLUMES 26–30

Reports on Progress in Physics

	VOL.	PAGE
Astrophysical neutrinos	28,	411
Atmosphere, study of general circulation of, and atmospheric tracers	26,	213
Atmospheric tracers and study of general circulation of atmosphere	26,	213
Atomic spectra, measurement of oscillator strengths in	27,	469
Atomic systems, resonant scattering of electrons by	29,	373
Atoms, transport through crystalline solids	27,	161
Biological structure and function, physical contributions to determination of	30,	445
Bonding, covalent, effects on magnetic properties of transition metal ions	29,	675
Chemico-physical processes in shock waves	30,	149
Cosmological models and their observational validation	29,	539
Cosmology, interpretation of observational data in terms of various cosmological models	29,	539
Cosmology, *see also* Elements, origin of		
Covalent bonding, effects on magnetic properties of transition metal ions	29,	675
Creep, high-temperature, in metals, physics of	29,	1
Critical phenomena, equilibrium, theory of	30,	615
Critical phenomena, experimental investigations of	30,	731
Crystal lattices, *see* Lattices, crystal		
Crystalline solids, transport of atoms through	27,	161
Crystallography, x-ray, of large molecules of biological importance	26,	105
Crystals, imperfections in, direct observation of	28,	291
Current injection, volume-controlled, in insulators	27,	329
Defects, dynamics of crystal lattices with	29,	217
Defects, point, some effects on vibrations of crystal lattices	28,	331
Detectors, high-energy particle	27,	93
Dynamics of crystal lattices with defects	29,	217
Electroluminescence	27,	369
Electron beam spectroscopy	28,	77
Electron microscopy, *see* Biological structure and function		
Electronic properties of liquid metals	26,	361
Electrons, resonant scattering by atomic systems	29,	373
Elementary particle physics, symmetry groups in	30,	227
Elementary particles, weak interactions of	27,	407
Elements, origin of	29,	489
Energetic particles, devices for detection of	27,	93
Equation of state of dense systems	28,	169
Equilibrium critical phenomena, theory of	30,	615
Ferroelectrics, some recent work on	27,	1
Ferromagnets, spin waves in	29,	285
Field, geomagnetic, theory of motion of Van Allen particles trapped in	26,	145
Fields, high magnetic, generation of	26,	69
Fluctuation–dissipation theorem	29,	255
Geomagnetic field, theory of motion of Van Allen particles trapped in	26,	145
Green functions in low-energy nuclear physics	27,	53
Green functions in statistical mechanics	27,	23
Gunn effect	30,	97
High-temperature creep in metals, physics of	29,	1
Imperfections in crystals, direct observation of	28,	291

	VOL.	PAGE
Inorganic solids, recombination emission in	30,	491
Insulators, volume-controlled current injection in	27,	329
Interactions, weak, of elementary particles	27,	407
Interferometric spectroscopy, two-beam	29,	729
Ions, transition metal, effects of covalent bonding on magnetic properties of	29,	675
Irreversible processes, theory of	26,	411
Isotope shifts, due to variation in nuclear charge distribution	29,	171
Lattice vibrations	26,	1
Lattices, crystal, some effects of point defects on vibrations of	28,	331
Lattices, crystal, with defects, dynamics of	29,	217
Lenses, measurement of optical transfer functions in	30,	1
Liquid metals, electronic properties of	26,	361
Liquids, microscopic transport phenomena in	29,	333
Macroscopic symmetry in space–time	26,	307
Magnetic fields, high, generation of	26,	69
Magnetic properties of transition metal ions, effects of covalent bonding on	29,	675
Magnetic traps, magnetohydrodynamic stability theory for plasma stability in	30,	333
Magnetohydrodynamic stability theory for plasma stability in magnetic traps	30,	333
Magnets, superconducting	30,	561
Many-body systems, quantum theory of	28,	201
Masers, optical and microwave	27,	241
Metal surfaces, nearly perfect, studies in preparation and behaviour of	26,	47
Metals, liquid, electronic properties of	26,	361
Metals, physics of high-temperature creep in	29,	1
Microscopic transport phenomena in liquids	29,	333
Microscopy, x-ray, methods of	28,	381
Microwave and optical masers	27,	241
Molecules, large, of biological importance, x-ray crystallography of	26,	105
Neutrino physics, high-energy	28,	61
Neutrinos, astrophysical	28,	411
Nuclear charge distribution, isotope shifts due to variation in	29,	171
Nuclear physics, low-energy, Green functions in	27,	53
Nuclear radiations, recent applications of semiconductor techniques in study of	30,	27
Nuclear reactions involving scattering of nucleons by nuclei	29,	131
Nuclear reactors as research instruments	30,	285
Nuclei, collective vibrations in, theory based on shell model	28,	113
Nuclei, scattering of nucleons by, nuclear reactions involving	29,	131
Nucleons, scattering by nuclei, nuclear reactions involving	29,	131
Optical and microwave masers	27,	241
Optical transfer functions in lenses, measurement of	30,	1
Oscillations, plasma	29,	623
Oscillator strengths in atomic spectra, measurement of	27,	469
Paramagnetic relaxation, theory of	30,	189
Particle physics, elementary, symmetry groups in	30,	227
Particles, elementary, weak interactions of	27,	407
Particles, high-energy, devices for detection of	27,	93
Particles, Van Allen, trapped in geomagnetic field, theory of motion of	26,	145
Photoconductivity	28,	15
Photography, ultra-high-speed	26,	269
Plasma oscillations	29,	623
Plasma spectroscopy	29,	35
Plasma stability in magnetic traps, magnetohydrodynamic stability theory for	30,	333
Point defects, some effects on vibrations of crystal lattices	28,	331
Polymerization, solid-state, induced by radiation	28,	463
Proteins, first stages in x-ray analysis of	28,	1
Quantum theory of many-body systems	28,	201

	VOL.	PAGE
Radiation, solid-state polymerization induced by	28,	463
Radiations, nuclear, recent applications of semiconductor techniques in study of	30,	27
Reactions, nuclear, involving scattering of nucleons by nuclei	29,	131
Reactors, nuclear, as research instruments	30,	285
Recombination emission in inorganic solids	30,	491
Relaxation, paramagnetic, theory of	30,	189
Resonant scattering of electrons by atomic systems	29,	373
Scattering of nucleons by nuclei, nuclear reactions involving	29,	131
Scattering, resonant, of electrons by atomic systems	29,	373
Semiconductor techniques, recent applications in study of nuclear radiations	30,	27
Semiconductors, thermomagnetic effects in	28,	249
Semiconductors, *see also* Gunn effect, Recombination emission		
Semimetals, thermomagnetic effects in	28,	249
Sense organs considered as transducers of environment	30,	375
Shock waves, chemico-physical processes in	30,	149
Solar wind	30,	409
Solid-state polymerization induced by radiation	28,	463
Solids, crystalline, transport of atoms through	27,	161
Space–time, macroscopic symmetry in	26,	307
Spectra, atomic, measurement of oscillator strengths in	27,	469
Spectroscopy, electron beam	28,	77
Spectroscopy, plasma	29,	35
Spectroscopy, two-beam interferometric	29,	729
Spin waves in ferromagnets	29,	285
Statistical mechanics, application to calculation of equation of state of dense systems	28,	169
Statistical mechanics, Green functions in	27,	23
Superconducting magnets	30,	561
Superconductors, type II	29,	445
Surfaces, metal, nearly perfect, studies in preparation and behaviour of	26,	47
Symmetry, macroscopic, in space–time	26,	307
Symmetry, unitary	30,	227
Thermomagnetic effects in semiconductors and semimetals	28,	249
Tracers, atmospheric, and study of general circulation of atmosphere	26,	213
Transducers of environment, sense organs considered as	30,	375
Transfer functions, optical, measurement in lenses	30,	1
Transition metal ions, effects of covalent bonding on magnetic properties	29,	675
Transport of atoms through crystalline solids	27,	161
Transport phenomena, microscopic, in liquids	29,	333
Traps, magnetic, magnetohydrodynamic stability theory for plasma stability in	30,	333
Two-beam interferometric spectroscopy	29,	729
Ultra-high-speed photography	26,	269
Ultra-violet, vacuum, wavelength measurements in	26,	181
Unitary symmetry	30,	227
Vacuum ultra-violet, wavelength measurements in	26,	181
Van Allen particles trapped in geomagnetic field, theory of motion of	26,	145
Vibrations, collective, in nuclei, theory based on shell model	28,	113
Vibrations, lattice	26,	1
Vibrations of crystal lattices, some effects of point defects on	28,	331
Wavelength measurements in vacuum ultra-violet	26,	181
Waves, spin, in ferromagnets	29,	285
Weak interactions of elementary particles	27,	407
Wind, solar	30,	409
X-ray analysis of proteins, first stages in	28,	1
X-ray crystallography of large molecules of biological importance	26,	105
X-ray diffraction, *see* Biological structure and function		
X-ray microscopy, methods of	28,	381
